

Aiman Ali

Senior FullStack Engineer · Architecture & AI-Augmented Development

Lahore, Pakistan | aimanzahid828@gmail.com | +92 349 459 2455 | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior JavaScript Engineer with 5+ years delivering high-performance, scalable web applications using React, Next.js, and TypeScript. Proven record of leading frontend architecture decisions, establishing code-quality standards, and mentoring engineers across projects. Combines deep JS expertise with AI-augmented development workflows — leveraging GitHub Copilot, Claude, and custom prompt pipelines to accelerate delivery, reduce boilerplate, and enforce best practices at scale. Experienced across the full product lifecycle in both agency and product environments.

CORE SKILLS

Languages	JavaScript (ES6+), TypeScript, HTML5, CSS3
Frameworks	React.js, Next.js (App Router & Pages), Vue.js, Express.js
Styling	Tailwind CSS, SASS/SCSS, Ant Design, CSS Modules
State & Data	Redux, Redux Toolkit, React Query, REST APIs, Prisma
AI Tooling	GitHub Copilot, Claude API, prompt engineering, AI-assisted code review, LLM-powered scaffolding
DevOps	Git, GitHub, GitLab, Bitbucket, CI/CD pipelines
Quality	Code reviews, unit testing, Lighthouse / Core Web Vitals, TTFB optimization, Agile/Scrum

AI-AUGMENTED DEVELOPMENT PRACTICE

Actively integrate AI tools into the engineering workflow to boost throughput and code quality — not as a replacement for engineering judgment, but as a force multiplier:

- GitHub Copilot & Claude: use AI pair-programming for boilerplate generation, test scaffolding, and reviewing PR diffs — cutting repetitive coding time by an estimated 25–30%.
- Prompt engineering: design and maintain reusable prompt templates for component generation, API contract drafting, and automated code-review summaries in team workflows.
- AI-assisted refactoring: leverage LLM analysis to identify dead code, propose performance improvements, and suggest TypeScript type narrowing across large codebases.
- Exploratory prototyping: use AI to spike unfamiliar APIs or libraries in hours rather than days, then evaluate and integrate selectively into production architecture.

EXPERIENCE

Senior Frontend Engineer (Freelance) · [Freelancer.com](#) · Lahore, Pakistan

August 2024 – Present

- Architected and delivered end-to-end frontend solutions for 4+ client projects, owning component design patterns, data-flow decisions, and deployment pipelines.
- Introduced AI-assisted scaffolding workflows (Copilot + Claude prompts) to client projects, reducing initial component build time by ~30%.
- Collaborated with clients and PMs on sprint planning, story decomposition, and milestone tracking — maintaining on-time delivery across engagements.
- Defined reusable design-system components for two SaaS clients, cutting cross-team inconsistencies and reducing future UI work by an estimated 20%.

Software Developer — Frontend · **SSA Soft (Pvt) Ltd** · Lahore, Pakistan

May 2023 – May 2024

- Led full frontend architecture and implementation of Rep Wallet Portal and Impiricus Pulse Runner — two production SaaS products serving pharma sales reps.
- Established component architecture standards and code-review guidelines adopted across a 5-person frontend team, reducing bug-regression rate by ~35%.
- Mentored 3 junior engineers: ran weekly code-review sessions, introduced TypeScript strict mode, and created onboarding documentation that reduced ramp time by 2 weeks.
- Integrated AI-specialist campaign recommendations into Pulse Runner's message customization flow, measurably increasing campaign engagement rates.
- Managed versioning and staging deployments via GitLab CI/CD; enforced branch protection and PR-review policy across all major releases.

Frontend Developer — React · **Codility Solutions** · Lahore, Pakistan

April 2021 – March 2023

- Built advanced React component libraries with complex Redux state management; reusable component patterns reduced cross-project development time by 20%.
- Drove a 30% improvement in page load time for the ERP Pack project by profiling with Lighthouse, eliminating render-blocking resources, and optimising bundle splitting.
- Reduced TTFB by 10% on abokiFX through Core Web Vitals monitoring and server-response optimisation with the backend team.
- Participated in code reviews and CI/CD pipeline maintenance; introduced pre-commit lint checks that cut style violations to near zero.

SELECTED PROJECTS

Postiz — Social Scheduling Platform <https://postiz.com>

Stack: Next.js, Nest.js, PostgreSQL, Prisma

- Delivered feature development and maintenance on a production scheduling SaaS (Next.js frontend, Nest.js backend) under tight client-led release cycles.
- Integrated AI-generated copy suggestions into the post-composer using the Claude API, reducing time-to-draft for users by an average of 40%.
- Owned database schema migrations in Prisma and coordinated API contract changes with the backend team.

SimplyBook — Appointment Booking Platform <https://simplybook.com>

Stack: Next.js 13, TypeScript, React

- Optimised landing pages and marketing routes for Core Web Vitals and Meta SEO, achieving measurable improvements in organic search indexing.
- Migrated legacy Pages Router flows to Next.js App Router with React Server Components, improving TTFB by ~15%.

Rep Wallet Portal — Pharma Rep Tools <https://repwallet.impiricus.com>

Stack: React, TypeScript, SASS, Ant Design, RESTful APIs

- Sole frontend engineer on the initial build: designed the component architecture, integrated 15+ REST endpoints, and implemented JWT authentication with role-based access control.
- Delivered the project on schedule across a 5-month engagement with zero post-launch critical defects.

EDUCATION

BS Information Technology · University of the Punjab, Lahore · 2020
